Height: 10 feet

Spread: 8 feet

Sunlight: ○ ◐

Hardiness Zone: 8

Other Names: Taitung Sago Palm

Description:

A very symmetrical plant with leathery leaves that resemble feathers; trunk is very low to subterranean in young plants, but lengthens with age; vigorous, faster growing, and hardier than other cycad species; a beautiful accent or container plant

Ornamental Features

Emperor Sago Palm features showy spikes of tan flowers held atop the branches in mid fall. It has attractive green evergreen foliage which emerges chartreuse in spring. The large glossy narrow pinnately compound leaves are highly ornamental and remain green throughout the winter. The rough brown bark adds an interesting dimension to the landscape.

Landscape Attributes

Emperor Sago Palm is an evergreen tree with a strong central leader and a towering form, with a high canopy of foliage concentrated at the top of the plant. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This tree will require occasional maintenance and upkeep, and should not require much pruning, except when necessary, such as to remove dieback. It has no significant negative characteristics.

Emperor Sago Palm is recommended for the following landscape applications;

- Accent
- Mass Planting
- Rock/Alpine Gardens
- General Garden Use
- Container Planting

Planting & Growing

Emperor Sago Palm will grow to be about 10 feet tall at maturity, with a spread of 8 feet. It has a low canopy with a typical clearance of 4 feet from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live to a ripe old age of 100 years or more; think of this as a heritage tree for future generations!

This tree does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in sandy soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This species is not originally from North America, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets.

Emperor Sago Palm is a fine choice for the yard, but it is also a good selection for planting in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
