Height: 25 feet

Spread: 20 feet

Sunlight: ○

Hardiness Zone: 5

Other Names: Sweet Cherry, Mazzard Cherry

Description:

A very productive variety, with showy white flowers in spring followed by heavy crops of large, sweet red cherries that are especially good for cooking; needs full sun, well drained soil and a pollinator; be prepared to fight the birds for fruit

Edible Qualities

Lambert Cherry is a medium-sized tree that is commonly grown for its edible qualities. It produces dark red round fruit (technically 'drupes') with black overtones and dark red flesh which are usually ready for picking in mid summer. Note that the fruits have hard inedible pits inside which must be removed before eating or processing. The fruits have a sweet taste and a juicy texture.

The fruit are most often used in the following ways:

- Fresh Eating
- Baking
- Preserves

Features & Attributes

Lambert Cherry is draped in stunning clusters of fragrant white flowers hanging below the branches in early spring before the leaves. It has dark green deciduous foliage. The pointy leaves turn yellow in fall. The fruits are showy dark red drupes with black overtones, which are carried in abundance in mid summer. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up. The smooth dark red bark adds an interesting dimension to the landscape.

This is a multi-stemmed deciduous tree with a shapely oval form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This plant will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Disease

Aside from its primary use as an edible, Lambert Cherry is sutiable for the following landscape applications;

- Accent
- Orchard/Edible Landscaping

Planting & Growing

Lambert Cherry will grow to be about 25 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 4 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 50 years or more. This variety requires a different selection of the same species growing nearby in order to set fruit.

This tree is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
