Plant Height: 8 inches

Flower Height: 12 inches

Spread: 20 inches

Sunlight:

Hardiness Zone: 3

Other Names: Basket of Gold, form. Alyssum saxatile Citrinum

Description:

This variety quickly matures into a glorious mat of bright lemon-yellow, in a dazzling floral display for several weeks; trim back to get returning blooms; an arresting sight when massed

Ornamental Features

Citrina Aurinia is covered in stunning clusters of fragrant lemon yellow star-shaped flowers at the ends of the stems from mid spring to early summer. Its small narrow leaves remain grayish green in color throughout the season.

Landscape Attributes

Citrina Aurinia is a dense herbaceous perennial with a ground-hugging habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This plant will require occasional maintenance and upkeep, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Citrina Aurinia is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use

Planting & Growing

Citrina Aurinia will grow to be about 8 inches tall at maturity extending to 12 inches tall with the flowers, with a spread of 20 inches. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and tends to be biennial, meaning that it puts on vegetative growth the first year, flowers the second, and then dies. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.
