Golden Emu Bush

Eremophila maculata 'Aurea'

Height: 4 feet

Spread: 4 feet

Sunlight: ○ ◐

Hardiness Zone: 7

Other Names: Yellow Emu Bush, Golden Fuchsia-bush

Description:

This Australian native shrub is very drought tolerant once established, great for water conservation gardens; pink blooms all along the branches in winter, accenting the small, gray green foliage; an interesting landscape specimen

Ornamental Features

Golden Emu Bush is draped in stunning yellow tubular flowers along the branches from late summer to late spring, which emerge from distinctive lemon yellow flower buds. It has attractive grayish green foliage with hints of yellow. The narrow leaves are highly ornamental and remain grayish green throughout the winter. It produces lime green capsules from late summer to late spring, which fade to tan over time.

Landscape Attributes

Golden Emu Bush is a multi-stemmed evergreen shrub with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Golden Emu Bush is recommended for the following landscape applications;

Planting & Growing

Golden Emu Bush will grow to be about 4 feet tall at maturity, with a spread of 4 feet. It has a low canopy with a typical clearance of 1 foot from the ground. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is not particular as to soil pH, but grows best in sandy soils, and is able to handle environmental salt. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Golden Emu Bush makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
