Height: 12 inches

Spread: 3 inches

Spacing: 6 inches

Sunlight:

Hardiness Zone: (annual)

Description:

A highly uniform variety that produces 6" long, deep red-purple beets; can be harvested full size or baby fingerlings; sweet and flavorful excellent for slicing, frying, pickling or roasting; staggered planting is recommended

Edible Qualities

Taunus Beet is an annual vegetable plant that is typically grown for its edible qualities. The entire above-ground parts of the plant are edible, and are usually harvested from early summer to early fall. The edible parts have a sweet taste and a firm texture.

The plant is most often used in the following ways:

- Eating When Cooked/Prepared
- Cooking
- Baking
- Pickling
- Canning

Planting & Growing

Taunus Beet will grow to be about 12 inches tall at maturity, with a spread of 3 inches. When planted in rows, individual plants should be spaced approximately 6 inches apart. This fast-growing vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop. Because of its relatively short time to maturity, it lends itself to a series of successive plantings each staggered by a week or two; this will prolong the effective harvest period.

This plant is typically grown in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.

Taunus Beet is a good choice for the vegetable garden, but it is also well-suited for use in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing the canvas against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
