Height: 24 inches

Spread: 18 inches

Spacing: 12 inches

Sunlight:

Hardiness Zone: (annual)

Description:

A vigorous and early maturing variety producing white, domed heads reaching 2-3lbs each; excellent leaf cover in the heat of summer; crunchy and sweet, delicious when roasted, grilled or eaten fresh; a wonderful addition to kitchen and market gardens

Edible Qualities

Minuteman Cauliflower is an annual vegetable plant that is typically grown for its edible qualities. The round green tightly-wrapped heads of foliage are typically harvested when mature. The heads have a sweet taste and a crunchy texture.

The heads are most often used in the following ways:

- Fresh Eating
- Eating When Cooked/Prepared
- Cooking
- Pickling
- Freezing

Planting & Growing

Minuteman Cauliflower will grow to be about 24 inches tall at maturity, with a spread of 18 inches. When planted in rows, individual plants should be spaced approximately 12 inches apart. This fast-growing vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop.

This plant is typically grown in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. This plant is a heavy feeder that requires frequent fertilizing throughout the growing season to perform at its best. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This is a selected variety of a species not originally from North America.

Minuteman Cauliflower is a good choice for the vegetable garden, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
