Height: 10 feet

Spread: 10 feet

Sunlight: ○ ◐

Hardiness Zone: 7

Other Names: Laurustinus

Description:

An attractive, bushy evergreen shrub, producing white clusters of flowers over a long period from late winter until mid-spring, followed by blue-black fruits in summer; tolerates shade well and is fast growing

Ornamental Features

French White Viburnum features showy cymes of lightly-scented white star-shaped flowers at the ends of the branches from late winter to mid spring, which emerge from distinctive creamy white flower buds. The royal blue fruits with black overtones are held in abundance in spectacular clusters from mid to late summer. It has dark green evergreen foliage. The pointy leaves remain dark green throughout the winter.

Landscape Attributes

French White Viburnum is a multi-stemmed evergreen shrub with a mounded form. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting birds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

French White Viburnum is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

French White Viburnum will grow to be about 10 feet tall at maturity, with a spread of 10 feet. It tends to be a little leggy, with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
