Height: 18 inches

Spread: 15 inches

Sunlight: ◐ ●

Hardiness Zone: 9

Other Names: Fire Lily, Bush Lily, Kaffir Lily

Description:

A beautiful bulb plant for the frost free garden or potted to move indoors in winter; glorious clusters of scarlet blooms with gold throats, rising above green, shiny foliage gives tremendous contrast; water more in spring and less in summer or winter

Ornamental Features

Abigail Clivia features showy clusters of lightly-scented scarlet trumpet-shaped flowers with orange overtones and gold throats at the ends of the stems from late winter to early spring. Its attractive large glossy sword-like leaves remain green in color throughout the year.

Landscape Attributes

Abigail Clivia is an herbaceous evergreen perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Abigail Clivia is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Container Planting

Planting & Growing

Abigail Clivia will grow to be about 16 inches tall at maturity, with a spread of 15 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an evegreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in partial shade to full shade. Keep it well away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type, but has a definite preference for acidic soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets.

Abigail Clivia is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers and foliage against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
