Kings Fire Grevillea

Grevillea 'Kings Fire'

Height: 6 feet

Spread: 8 feet

Sunlight:

Hardiness Zone: 9

Description:

An adaptable species assuming an upright, airy form; grows well in most well drained soils; large, orange-scarlet spidery flower clusters emerge nearly year round and are good for cutting; finely dissected, ferny gray-green foliage adds great texture

Ornamental Features

Kings Fire Grevillea features showy clusters of red spider-like flowers with orange overtones and gold tips at the ends of the branches from mid winter to late fall, which emerge from distinctive white flower buds. The flowers are excellent for cutting. It has attractive grayish green evergreen foliage which emerges chartreuse in spring. The deeply cut ferny leaves are highly ornamental and remain grayish green throughout the winter.

Landscape Attributes

Kings Fire Grevillea is an open multi-stemmed evergreen shrub with an upright spreading habit of growth. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting birds and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Kings Fire Grevillea is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- Rock/Alpine Gardens
- General Garden Use
- Container Planting

Planting & Growing

Kings Fire Grevillea will grow to be about 6 feet tall at maturity, with a spread of 8 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. This plant does not require much in the way of fertilizing once established. It is not particular as to soil type, but has a definite preference for acidic soils, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.

Kings Fire Grevillea makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
