Height: 10 feet

Spread: 7 feet

Sunlight: ○ ◐

Hardiness Zone: 8

**Description:**

Attractive foliage is displayed on this dwarf selection; juicy lemons are produced with few to no seeds in winter, then year-round when plant is mature; great container plant for the patio or indoors in colder climates; prune to maintain desired size

## Features & Attributes

Dwarf Lisbon Lemon features showy clusters of fragrant white star-shaped flowers with buttery yellow eyes at the ends of the branches from early spring to late winter, which emerge from distinctive lilac purple flower buds. Its attractive glossy oval leaves remain dark green in color throughout the year. The yellow oval fruit is edible and has a tangy taste and a juicy texture. Note that in general, it can be difficult to get plants to reliably produce fruit indoors; this may be a challenge best reserved for adventurous and experienced gardeners.

This is a multi-stemmed evergreen houseplant with an upright spreading habit of growth. This plant may benefit from an occasional pruning to look its best.

## Planting & Growing

When grown indoors, Dwarf Lisbon Lemon can be expected to grow to be about 10 feet tall at maturity, with a spread of 7 feet. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 50 years. This houseplant will do well in a location that gets either direct or indirect sunlight, although it will usually require a more brightly-lit environment than what artificial indoor lighting alone can provide. It does best in average to evenly moist soil, but will not tolerate standing water. The surface of the soil shouldn't be allowed to dry out completely, and so you should expect to water this plant once and possibly even twice each week. Be aware that your particular watering schedule may vary depending on its location in the room, the pot size, plant size and other conditions; if in doubt, ask one of our experts in the store for advice. It will benefit from a regular feeding with a general-purpose fertilizer with every second or third watering. It is very fussy about its soil conditions and must be grown in rich, acidic soil to ensure success. Contact the store for specific recommendations on pre-mixed potting soil for this plant.

There are many factors that will affect the ultimate height, spread and overall performance of a plant when grown indoors; among them, the size of the pot it's growing in, the amount of light it receives, watering frequency, the pruning regimen and repotting schedule. Use the information described here as a guideline only; individual performance can and will vary. Please contact the store to speak with one of our experts if you are interested in further details concerning recommendations on pot size, watering, pruning, repotting, etc.

*-- THIS IS A HOUSEPLANT AND IS NOT MEANT TO SURVIVE THE WINTER OUTDOORS IN OUR CLIMATE --*
