Height: 12 inches

Spread: 24 inches

Sunlight: ◐

Hardiness Zone: 10

Other Names: Shine Star Calathea, syn. Goeppertia roseopicta

**Description:**

A classic houseplant variety featuring rounded dark green leaves with light green midribs, silver markings and deep rose undersides ; provide consistent moisture and humidity; should not be watered or misted with tap water, distilled or filtered is best

**Features & Attributes**

Shinestar Rose Painted Calathea's attractive textured oval leaves emerge chartreuse, turning dark green in color with showy silver variegation and tinges of rose throughout the year on a plant with an upright spreading habit of growth.

This is an herbaceous evergreen houseplant with an upright spreading habit of growth. Its relatively coarse texture stands it apart from other indoor plants with finer foliage. This plant should not require much pruning, except when necessary to keep it looking its best.

**Planting & Growing**

When grown indoors, Shinestar Rose Painted Calathea can be expected to grow to be about 12 inches tall at maturity, with a spread of 24 inches. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 5 years. This houseplant should be situated in a location that that gets indirect sunlight at most, although it will usually require a more brightly-lit environment than what artificial indoor lighting alone can provide. It does best in average to evenly moist soil, but will not tolerate standing water. The surface of the soil shouldn't be allowed to dry out completely, and so you should expect to water this plant once and possibly even twice each week. Be aware that your particular watering schedule may vary depending on its location in the room, the pot size, plant size and other conditions; if in doubt, ask one of our experts in the store for advice. It will benefit from a regular feeding with a general-purpose fertilizer with every second or third watering. It is not particular as to soil pH, but grows best in rich soil. Contact the store for specific recommendations on pre-mixed potting soil for this plant.

There are many factors that will affect the ultimate height, spread and overall performance of a plant when grown indoors; among them, the size of the pot it's growing in, the amount of light it receives, watering frequency, the pruning regimen and repotting schedule. Use the information described here as a guideline only; individual performance can and will vary. Please contact the store to speak with one of our experts if you are interested in further details concerning recommendations on pot size, watering, pruning, repotting, etc.

*-- THIS IS A HOUSEPLANT AND IS NOT MEANT TO SURVIVE THE WINTER OUTDOORS IN OUR CLIMATE --*
