Height: 3 feet

Spread: 24 inches

Spacing: 18 inches

Sunlight: ○ ◐

Hardiness Zone: (annual)

Description:

This high yielding, cut and come again selection is a must have in large patio containers and kitchen gardens; cold hardy and heat tolerant; slightly savoyed green leaves have a rich and savory flavor, perfect for soups, stews or steaming

Edible Qualities

Bulldog Collard Greens is an annual vegetable plant that is commonly grown for its edible qualities. The crinkled oval dark green leaves with distinctive creamy white veins are usually harvested from early spring to mid fall. The leaves have a bitter taste.

The leaves are most often used in the following ways:

- Fresh Eating
- Eating When Cooked/Prepared
- Cooking

Planting & Growing

Bulldog Collard Greens will grow to be about 3 feet tall at maturity, with a spread of 24 inches. When planted in rows, individual plants should be spaced approximately 18 inches apart. This fast-growing vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop. Because of its relatively short time to maturity, it lends itself to a series of successive plantings each staggered by a week or two; this will prolong the effective harvest period.

This plant is typically grown in a designated vegetable garden. It does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. This plant is a heavy feeder that requires frequent fertilizing throughout the growing season to perform at its best. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.

Bulldog Collard Greens is a good choice for the vegetable garden, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
