Plant Height: 12 inches

Flower Height: 18 inches

Spread: 5 feet

Sunlight: ○ ◐

Hardiness Zone: 9

Other Names: Daubeniana, Daubenyana Waterlily

Description:

A wonderful selection producing soft white flowers with sky blue tips and golden centers; blooms rise above oval, bright green foliage in summer; hardier than most, and tolerant of some shade; water lilies dislike moving water; annual in colder climates

Ornamental Features

Dauben Tropical Water Lily features showy fragrant semi-double white cup-shaped flowers with gold eyes and sky blue tips at the ends of the stems from early summer to late fall. The flowers are excellent for cutting. Its attractive large glossy oval leaves remain green in color with hints of chartreuse throughout the year.

Landscape Attributes

Dauben Tropical Water Lily is an herbaceous evergreen perennial with a ground-hugging habit of growth. Its relatively coarse texture can be used to stand it apart from other garden plants with finer foliage.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. It has no significant negative characteristics.

Dauben Tropical Water Lily is recommended for the following landscape applications;

- Water Gardens
- Naturalizing And Woodland Gardens
- Container Planting
- Bog Gardens

Planting & Growing

Dauben Tropical Water Lily will grow to be about 12 inches tall at maturity extending to 18 inches tall with the flowers, with a spread of 5 feet. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an evegreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It is an excellent choice for very wet locations or locations with some standing water. It may require supplemental watering during periods of drought or extended heat. To help this plant achive its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Dauben Tropical Water Lily is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. Because of its spreading habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
