Height: 24 inches

Spread: 24 inches

Spacing: 24 inches

Sunlight:

Hardiness Zone: (annual)

Other Names: Chili Pepper

Group/Class: Hot Jalapeno

Description:

Fast growing producing high yields of extra large, 4" long spicy jalapenos peppers with a hot and spicy kick; can be harvested green or let to mature to red; the perfect pepper for stuffed popped, tossed on the grilled or pickled

Edible Qualities

Goliath Jalapeno Pepper is an annual vegetable plant that is commonly grown for its edible qualities, although it does have ornamental merits as well. It produces large green oblong peppers (which are technically 'berries') which can be harvested at any point. The fruit will often fade to red over time. The peppers have a hot taste and a crisp texture.

The peppers are most often used in the following ways:

- Fresh Eating
- Cooking
- Drying
- Seasoning
- Sauces

Planting & Growing

Goliath Jalapeno Pepper will grow to be about 24 inches tall at maturity, with a spread of 24 inches. When planted in rows, individual plants should be spaced approximately 24 inches apart. This vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop.

This plant can be integrated into a landscape or flower garden by creative gardeners, but is usually grown in a designated vegetable garden. It should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It may require supplemental watering during periods of drought or extended heat. This plant is a heavy feeder that requires frequent fertilizing throughout the growing season to perform at its best. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Goliath Jalapeno Pepper is a good choice for the vegetable garden, but it is also well-suited for use in outdoor containers and hanging baskets. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
