

Geranium Leaf Aralia

Polyscias guilfoylei

Height: 5 feet

Spread: 3 feet

Sunlight: ◐ ●

Hardiness Zone: 10

Other Names: Coffee Tree

Description:

A popular and easy to grow houseplant that may be brought outdoors in summer; prefers bright indirect light, avoid full sun; elegant, ovate, geranium-like leaves can range from full green to variegated with white and yellow; can prune at any time

Features & Attributes

Geranium Leaf Aralia's attractive glossy oval compound leaves emerge light green, turning green in color with showy white variegation throughout the year on a plant with an upright spreading habit of growth.

This is a dense multi-stemmed evergreen houseplant with an upright spreading habit of growth. Its relatively fine texture sets it apart from other indoor plants with less refined foliage. This plant can be pruned at any time to keep it looking its best.

Planting & Growing

When grown indoors, Geranium Leaf Aralia can be expected to grow to be about 5 feet tall at maturity, with a spread of 3 feet. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 20 years. This houseplant performs well in both bright or indirect sunlight and strong artificial light, and can therefore be situated in almost any well-lit room or location. It does best in average to evenly moist soil, but will not tolerate standing water. The surface of the soil shouldn't be allowed to dry out completely, and so you should expect to water this plant once and possibly even twice each week. Be aware that your particular watering schedule may vary depending on its location in the room, the pot size, plant size and other conditions; if in doubt, ask one of our experts in the store for advice. It will benefit from a regular feeding with a general-purpose fertilizer with every second or third watering. It is particular about its soil conditions, with a strong preference for rich, acidic soil. Contact the store for specific recommendations on pre-mixed potting soil for this plant.

There are many factors that will affect the ultimate height, spread and overall performance of a plant when grown indoors; among them, the size of the pot it's growing in, the amount of light it receives, watering frequency, the pruning regimen and repotting schedule. Use the information described here as a guideline only; individual performance can and will vary. Please contact the store to speak with one of our experts if you are interested in further details concerning recommendations on pot size, watering, pruning, repotting, etc.
