Plant Height: 3 feet

Flower Height: 5 feet

Spread: 10 feet

Sunlight: ○ ◐

Hardiness Zone: 7

Other Names: California Tree Poppy, Coulter's Matilija Poppy

Description:

A Californian native perennial featuring volumes of large, showy white blooms with golden centers over glaucous gray foliage; peak flowering during spring and summer; spreads by underground runners, establish a root barrier if containment is desired

Ornamental Features

White Cloud Matilija Poppy has masses of beautiful fragrant white cup-shaped flowers with gold centers at the ends of the stems from early spring to early summer, which are most effective when planted in groupings. The flowers are excellent for cutting. Its attractive lobed pinnately compound leaves emerge light green in spring, turning grayish green in color with hints of powder blue throughout the season.

Landscape Attributes

White Cloud Matilija Poppy is a spreading perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. It is a good choice for attracting birds, bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading

White Cloud Matilija Poppy is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover
- Naturalizing And Woodland Gardens
- Container Planting

Planting & Growing

White Cloud Matilija Poppy will grow to be about 3 feet tall at maturity extending to 5 feet tall with the flowers, with a spread of 10 feet. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. This plant does not require much in the way of fertilizing once established. It is not particular as to soil pH, but grows best in sandy soils, and is able to handle environmental salt. It is somewhat tolerant of urban pollution. This is a selection of a native North American species. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

White Cloud Matilija Poppy is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
