Green Mexican Hens

Echeveria shaviana 'Green'

Plant Height: 8 inches

Flower Height: 12 inches

Spread: 12 inches

Sunlight: ○ ◐

Hardiness Zone: 9

Other Names: Mexican Hens And Chicks

Description:

A very drought tolerant variety, producing rosettes of sea-green leaves with wavy and crinkled white margins; leaves form a pink blush in full sun; distinctive pink flowers with yellow tips, rise above in summer; ideal for patio containers or rock gardens

Ornamental Features

Green Mexican Hens features unusual spikes of pink bell-shaped flowers with yellow tips rising above the foliage from early to mid summer. Its attractive crinkled oval leaves remain bluish-green in color with distinctive white edges and tinges of powder blue throughout the year.

Landscape Attributes

Green Mexican Hens is a dense herbaceous evergreen perennial with tall flower stalks held atop a low mound of foliage. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This plant will require occasional maintenance and upkeep, and should not require much pruning, except when necessary, such as to remove dieback. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading

Green Mexican Hens is recommended for the following landscape applications;

- Accent
- Mass Planting
- Rock/Alpine Gardens
- General Garden Use
- Container Planting

Planting & Growing

Green Mexican Hens will grow to be about 8 inches tall at maturity extending to 12 inches tall with the flowers, with a spread of 12 inches. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 20 years. As an evegreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. Like most succulents and cacti, this plant prefers to grow in poor soils and should therefore never be fertilized. It is not particular as to soil pH, but grows best in sandy soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Green Mexican Hens is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers and foliage against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
