Height: 30 feet

Spread: 10 feet

Sunlight:

Hardiness Zone: 5

Description:

A striking medium sized tree with a pyramidal habit of growth, horizontal branches silver-blue new foliage that matures to rich icy-blue; best used as a colorful landscape accent; rich color year round for added winter interest

Ornamental Features

Eisregen Blue Himilayan Cedar is primarily valued in the landscape for its distinctively pyramidal habit of growth. It has attractive silvery blue evergreen foliage. The needles are highly ornamental and remain silvery blue throughout the winter.

Landscape Attributes

Eisregen Blue Himilayan Cedar is an evergreen tree with a strong central leader and a distinctive and refined pyramidal form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance tree, and usually looks its best without pruning, although it will tolerate pruning. It has no significant negative characteristics.

Eisregen Blue Himilayan Cedar is recommended for the following landscape applications;

- Accent
- Vertical Accent

Planting & Growing

Eisregen Blue Himilayan Cedar will grow to be about 30 feet tall at maturity, with a spread of 10 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and should not be planted underneath power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 80 years or more.

This tree should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It may require supplemental watering during periods of drought or extended heat. This plant will benefit from an application of bonemeal and/or mycorrhizal fertilizer at the time of planting. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. This is a selected variety of a species not originally from North America.
