Height: 5 feet

Spread: 5 feet

Sunlight:

Hardiness Zone: 3

Description:

A compact garden accent shrub featuring large, showy panicles of pink flowers in early summer; cooler weather transforms flowers to rich purple; upright and dense, an ideal garden shrub alone or in groupings; sweetly fragrant

Ornamental Features

Dream Cloud Manchurian Lilac is covered in stunning panicles of fragrant shell pink flowers with white eyes rising above the foliage in early summer. The flowers are excellent for cutting. It has dark green deciduous foliage. The pointy leaves turn an outstanding burgundy in the fall.

Landscape Attributes

Dream Cloud Manchurian Lilac is a dense multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting butterflies to your yard. It has no significant negative characteristics.

Dream Cloud Manchurian Lilac is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Dream Cloud Manchurian Lilac will grow to be about 5 feet tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It may require supplemental watering during periods of drought or extended heat. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
