Plant Height: 6 inches

Flower Height: 18 inches

Spread: 6 inches

Spacing: 10 inches

Sunlight: ◐ ●

Hardiness Zone: 3

Other Names: Giantland Sunny Mouse Ears, Plantain Lily, Funkia

Description:

This miniature mounded hosta features small round, golden yellow leaves and dainty spikes of lavender flowers in mid-summer; plant in a morning sun area or filtered shade for best yellow color; provides excellent color contrast

Ornamental Features

Sunny Mouse Ears Hosta features dainty spikes of lavender tubular flowers rising above the foliage in mid summer. Its attractive tiny textured heart-shaped leaves remain gold in color throughout the season.

Landscape Attributes

Sunny Mouse Ears Hosta is a dense herbaceous perennial with tall flower stalks held atop a low mound of foliage. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Sunny Mouse Ears Hosta is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Groundcover

Planting & Growing

Sunny Mouse Ears Hosta will grow to be only 6 inches tall at maturity extending to 18 inches tall with the flowers, with a spread of 6 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 10 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to full shade. Keep it well away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
