Height: 3 feet

Spread: 3 feet

Sunlight: ○ ◐

Hardiness Zone: 4

Description:

A stunning shrub, bringing color into the landscape; fiery red foliage emerge in spring, maturing to burgundy with lime green margins by fall; a compact, mounded habit, excellent for use in containers or as an accent in garden beds

Ornamental Features

Sunjoy Really Red Japanese Barberry has attractive dark red foliage edged in lime green with hints of burgundy which emerges red in spring on a plant with a round habit of growth. The small glossy oval leaves are highly ornamental and turn an outstanding scarlet in the fall. It features tiny clusters of yellow flowers hanging below the branches in mid spring.

Landscape Attributes

Sunjoy Really Red Japanese Barberry is a dense multi-stemmed deciduous shrub with a more or less rounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and can be pruned at anytime. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spiny

Sunjoy Really Red Japanese Barberry is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Sunjoy Really Red Japanese Barberry will grow to be about 3 feet tall at maturity, with a spread of 3 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. This plant will benefit from an application of bonemeal and/or mycorrhizal fertilizer at the time of planting. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
