My Lady™ Holly

Ilex 'My Lady'

Height: 15 feet

Spread: 10 feet

Sunlight: ○ ◐

Hardiness Zone: 6

Description:

A beautiful vigorous variety, presenting a tall, upright and pyramidal shape with a dense, compact growth habit; glossy, deep green foliage; red berries during the fall into winter; an excellent specimen plant; great for borders, hedges or screening

Ornamental Features

My Lady Holly has dark green evergreen foliage which emerges green in spring on a plant with a pyramidal habit of growth. The small glossy narrow leaves remain dark green throughout the winter. It produces red berries from mid fall to late winter.

Landscape Attributes

My Lady Holly is a multi-stemmed evergreen shrub with a distinctive and refined pyramidal form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This shrub will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Suckering

My Lady Holly is recommended for the following landscape applications;

Planting & Growing

My Lady Holly will grow to be about 15 feet tall at maturity, with a spread of 10 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more. This is a dioecious species, meaning that individual plants are either male or female. Only the females will produce fruit, and a male variety of the same species is required nearby as a pollinator.

This shrub does best in full sun to partial shade. It prefers to grow in moist to wet soil, and will even tolerate some standing water. It may require supplemental watering during periods of drought or extended heat. This plant should be periodically fertilized throughout the active growing season with a specially-formulated acidic fertilizer. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
