Height: 15 feet

Spread: 8 feet

Sunlight:

Hardiness Zone: 5

Group/Class: Climbing Rose

Description:

One of the most majestic, magnanimous and commanding climbers in the world of roses, producing an endless procession of massive flowers that are slightly pendant, magical when grown on an arbor; all roses need full sun and well-drained soil

Ornamental Features

Mme. Gregoire Staechelin Rose is covered in stunning lightly-scented semi-double pink flowers at the ends of the branches from early summer to early fall, which emerge from distinctive cherry red flower buds. The flowers are excellent for cutting. It has dark green deciduous foliage. The oval compound leaves turn yellow in fall.

Landscape Attributes

Mme. Gregoire Staechelin Rose is a multi-stemmed deciduous woody vine with a twining and trailing habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a high maintenance woody vine that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Disease
- Spiny

Mme. Gregoire Staechelin Rose is recommended for the following landscape applications;

- Accent
- Hedges/Screening
- General Garden Use

Planting & Growing

Mme. Gregoire Staechelin Rose will grow to be about 15 feet tall at maturity, with a spread of 8 feet. As a climbing rose, it can be leggy near the base and may be concealed by underplanting with lower-growing facer plants. It should be planted near a fence, trellis or other landscape structure where it can be trained to grow upwards on it, or allowed to trail off a retaining wall or slope. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This woody vine should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
