Redwing Highbush Cranberry

Viburnum trilobum 'JN Select'

Height: 10 feet

Spread: 10 feet

Sunlight: ○ ◐

Hardiness Zone: 2

Other Names: Red Wing, American Cranberrybush

Description:

An improved selection of this beautiful native species with rich red leaf tips in spring, very showy pinwheel clusters of flowers in spring followed by abundant brilliant red berries, spectacular fall color; denser habit, faster growing than the species

Ornamental Features

Redwing Highbush Cranberry is covered in stunning white lacecap flowers held atop the branches in late spring. It has attractive dark green deciduous foliage which emerges brick red in spring. The large serrated lobed leaves are highly ornamental and turn an outstanding crimson in the fall. It features an abundance of magnificent scarlet berries from late summer to late winter. The smooth gray bark and gold branches add an interesting dimension to the landscape.

This plant is primarily grown as an ornamental, but it's also valued for its edible qualities. The round sour berries are most often used in the following ways:

- Preserves

Landscape Attributes

Redwing Highbush Cranberry is a dense multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting birds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Redwing Highbush Cranberry is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Redwing Highbush Cranberry will grow to be about 10 feet tall at maturity, with a spread of 10 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for 40 years or more. While it is considered to be somewhat self-pollinating, it tends to set heavier quantities of fruit with a different variety of the same species growing nearby.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species.
