Height: 12 feet

Spread: 6 feet

Sunlight: ◐ ●

Hardiness Zone: 6

Other Names: Common Yew

Description:

A justifiably popular narrowly upright evergreen tree with beautiful golden foliage all season long, strongly vertical branching, and bright red berries; ideal for the garden, makes a great hedge or screen, takes pruning exceptionally well

Ornamental Features

Standish Yew is a dwarf conifer which is primarily valued in the landscape or garden for its rigidly columnar form. It has attractive gold evergreen foliage. The ferny sprays of foliage are highly ornamental and turn chartreuse in the fall, which persists throughout the winter. The fruits are showy red drupes displayed from early to late fall.

Landscape Attributes

Standish Yew is a dense multi-stemmed evergreen shrub with a narrowly upright and columnar growth habit. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and can be pruned at anytime. It has no significant negative characteristics.

Standish Yew is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use
- Topiary

Planting & Growing

Standish Yew will grow to be about 12 feet tall at maturity, with a spread of 6 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live to a ripe old age of 100 years or more; think of this as a heritage shrub for future generations!

This shrub does best in a location that gets morning sunlight but is shaded from the hot afternoon sun, although it will also grow in full shade. Keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets.
