Plant Height: 24 inches

Flower Height: 3 feet

Spread: 3 feet

Spacing: 24 inches

Sunlight: ○ ◐ ●

Hardiness Zone: 4

**Description:**

Finely cut leaves with a bronze overcast create the perfect setting for the nodding plumes of deep rose-pink flowers in early summer; moist soils are a necessity when planting in full sun

**Ornamental Features**

Die Schone Rodgersia features bold plumes of pink flowers with rose overtones rising above the foliage from late spring to early summer. The flowers are excellent for cutting. Its attractive large serrated oval palmate leaves are olive green in color with distinctive brick red edges. As an added bonus, the foliage turns a gorgeous dark red in the fall.

**Landscape Attributes**

Die Schone Rodgersia is an herbaceous perennial with a rigidly upright and towering form. Its wonderfully bold, coarse texture can be very effective in a balanced garden composition.

This is a relatively low maintenance plant, and should be cut back in late fall in preparation for winter. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Die Schone Rodgersia is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover
- Bog Gardens

**Planting & Growing**

Die Schone Rodgersia will grow to be about 24 inches tall at maturity extending to 3 feet tall with the flowers, with a spread of 3 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 24 inches apart. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant performs well in both full sun and full shade. It is quite adaptable, prefering to grow in average to wet conditions, and will even tolerate some standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
