Description:

A cute and petite variety featuring tight mounds of chartreuse, heart shaped leaves with medium-heavy corrugation; lilac flowers appear in mid to late summer on tall, leafy scapes; adds texture and contrast to shaded borders, beds and containers

Ornamental Features

Gold Drop Hosta features dainty spikes of lilac purple tubular flowers rising above the foliage from mid summer to early fall. Its attractive small textured heart-shaped leaves remain chartreuse in color throughout the season.

Landscape Attributes

Gold Drop Hosta is a dense herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Gold Drop Hosta is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Groundcover

Planting & Growing

Gold Drop Hosta will grow to be only 6 inches tall at maturity extending to 10 inches tall with the flowers, with a spread of 12 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 10 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to full shade. Keep it well away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
