Height: 10 feet

Spread: 12 feet

Sunlight: ○ ◐

Hardiness Zone: 4

Description:

A breathtaking shrub with flat top cymes of white flowers in spring, showy flowers are sterile and surround unshowy fertile blooms; berries begin red and ripen to black; large growing habit makes it suitable for the back of borders

Ornamental Features

Rotundifolium Doublefile Viburnum is draped in stunning white lacecap flowers held atop the branches in mid spring. The red fruits are held in abundance in spectacular clusters from mid summer to early fall. It has dark green deciduous foliage. The serrated pointy leaves turn an outstanding brick red in the fall.

Landscape Attributes

Rotundifolium Doublefile Viburnum is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting birds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Rotundifolium Doublefile Viburnum is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Rotundifolium Doublefile Viburnum will grow to be about 10 feet tall at maturity, with a spread of 12 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
