

## Russian Tarragon

*Artemisia dracunculoides*

Plant Height: 24 inches

Flower Height: 3 feet

Spread: 24 inches

Sunlight: ☐

Hardiness Zone: 3a

### Description:

A very hardy variety that can be used for culinary purposes; has a milder flavor than the French variety; thrives in well-drained, sandy or poor soils and full sun; great for containers

### Ornamental Features

Russian Tarragon's attractive small fragrant narrow leaves emerge light green in spring, turning grayish green in color throughout the season on a plant with an upright spreading habit of growth.

### Landscape Attributes

Russian Tarragon is a dense herbaceous perennial with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and can be pruned at anytime. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Self-Seeding

Russian Tarragon is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Herb Gardens
- Container Planting

### Planting & Growing

Russian Tarragon will grow to be about 24 inches tall at maturity extending to 3 feet tall with the flowers, with a spread of 24 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is not originally from North America..

Russian Tarragon is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
