

Satinleaf

Chrysophyllum oliviforme

Height: 30 feet

Spread: 20 feet

Sunlight: ☐ ☒

Hardiness Zone: 10a

Other Names: Damson Plum, Wild Star-apple, Saffron Tree

Description:

A medium-sized tree with aesthetically pleasing, satin textured green leaves with copper undersides; branches will slightly droop as the tree matures; small creamy yellow flowers and purple fruit year round; a great feature for yards and public spaces

Ornamental Features

Satinleaf has attractive dark green foliage with coppery-bronze undersides on a tree with an upright spreading habit of growth. The glossy oval leaves are highly ornamental and remain dark green throughout the winter. It features subtle clusters of buttery yellow star-shaped flowers with white overtones along the branches from late winter to early winter. It produces deep purple berries from late winter to early winter. The mottled khaki (brownish-green) bark adds an interesting dimension to the landscape.

Landscape Attributes

Satinleaf is an evergreen tree with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

Planting & Growing

Satinleaf will grow to be about 30 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 4 feet from the ground, and should not be planted underneath power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 50 years or more.

This tree does best in full sun to partial shade. It is quite adaptable, preferring to grow in average to wet conditions, and will even tolerate some standing water. This plant will benefit from an application of bonemeal and/or mycorrhizal fertilizer at the time of planting. It is not particular as to soil type or pH, and is able to handle environmental salt. It is somewhat tolerant of urban pollution. This species is native to parts of North America..
