

Golden Prince® Wintercreeper
Euonymus fortunei 'Monce'

Height: 4 feet

Spread: 4 feet

Sunlight: ○ ● ●

Hardiness Zone: 4b

Other Names: Wintercreeper Euonymus

Description:

A fast growing, vigorous mounded shrub featuring eye-catching gold variegated evergreen leaves in spring that fade to cream and green; a versatile and adaptable color accent that is tolerant of most soils, except overly wet

Ornamental Features

Golden Prince Wintercreeper has attractive green foliage edged in gold with hints of creamy white which emerges yellow in spring on a plant with a mounded habit of growth. The glossy oval leaves are highly ornamental and remain green throughout the winter.

Landscape Attributes

Golden Prince Wintercreeper is a multi-stemmed evergreen shrub with a mounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This shrub will require occasional maintenance and upkeep, and can be pruned at anytime. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Golden Prince Wintercreeper is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use
- Groundcover

Planting & Growing

Golden Prince Wintercreeper will grow to be about 4 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub performs well in both full sun and full shade. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. This is a selected variety of a species not originally from North America.
