

Autumn Radiance Red Maple

Acer rubrum 'Autumn Radiance'

Height: 50 feet

Spread: 40 feet

Sunlight: 

Hardiness Zone: 3a

Other Names: Swamp Maple, Scarlet Maple

Description:

The tree that lights up the landscape with vibrant and consistent red in fall; a great shade tree, but very intolerant of alkaline soils; fall color is not consistently red in the species, so this variety is much preferred

Ornamental Features

Autumn Radiance Red Maple features showy clusters of red flowers along the branches in early spring before the leaves. It has green foliage with white undersides. The lobed leaves turn an outstanding red in the fall. It produces red samaras in late spring. The furrowed silver bark and brick red branches add an interesting dimension to the landscape.

Landscape Attributes

Autumn Radiance Red Maple is a dense deciduous tree with a shapely oval form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It is a good choice for attracting birds, bees and butterflies to your yard. It has no significant negative characteristics.

Planting & Growing

Autumn Radiance Red Maple will grow to be about 50 feet tall at maturity, with a spread of 40 feet. It has a high canopy with a typical clearance of 7 feet from the ground, and should not be planted underneath power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a medium rate, and under ideal conditions can be expected to live for 80 years or more.

This tree should only be grown in full sunlight. It is quite adaptable, preferring to grow in average to wet conditions, and will even tolerate some standing water. It is not particular as to soil type, but has a definite preference for acidic soils, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution. This is a selection of a native North American species.
