

Upright Japanese Barberry

Berberis thunbergii 'Erecta'

Height: 6 feet

Spread: 5 feet

Sunlight: ☐ ☒

Hardiness Zone: 4a

Description:

Beautiful fall color is a combination of red, yellow and orange; neat, upright growth with fewer lateral branches, perfect for hedges; this spiny shrub can be used as a deterrent to trespassers; best color in full sun

Ornamental Features

Upright Japanese Barberry is primarily grown for its highly ornamental fruit. The fruits are showy scarlet drupes carried in abundance from early to late fall. It has attractive chartreuse-variegated green foliage. The small oval leaves are highly ornamental and turn an outstanding harvest gold in the fall. It features tiny clusters of yellow flowers hanging below the branches in mid spring.

Landscape Attributes

Upright Japanese Barberry is a dense multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This shrub will require occasional maintenance and upkeep, and can be pruned at anytime. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spiny

Upright Japanese Barberry is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Upright Japanese Barberry will grow to be about 6 feet tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
