

Darrow's Blueberry

Vaccinium darrowii

Height: 3 feet

Spread: 3 feet

Sunlight: ☐ ☒

Hardiness Zone: 7

Other Names: Evergreen Blueberry, Scrub Blueberry

Description:

This compact, native evergreen variety features small, elliptic blue-green leaves and bell shaped pink to white flowers in mid spring; produces an abundant crop of sweet blueberries in mid-summer; great for the garden or patio containers

Edible Qualities

Darrow's Blueberry is a small shrub that is typically grown for its edible qualities, although it does have ornamental merits as well. It produces clusters of navy blue round berries with silvery blue overtones which are usually ready for picking in mid summer. The berries have a sweet taste and a juicy texture.

The berries are most often used in the following ways:

- Fresh Eating
- Cooking
- Baking
- Preserves

Features & Attributes

Darrow's Blueberry features dainty clusters of shell pink bell-shaped flowers with white overtones hanging below the branches from early to mid spring. It has bluish-green foliage with hints of silvery blue. The glossy oval leaves turn an outstanding plum purple in the fall, which persists throughout the winter. It features an abundance of magnificent navy blue berries with silvery blue overtones from late spring to mid summer.

This is a multi-stemmed evergreen shrub with a mounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This is a relatively low maintenance plant, and usually looks its best without pruning, although it will tolerate pruning. It is a good choice for attracting birds to your yard. It has no significant negative characteristics.

Aside from its primary use as an edible, Darrow's Blueberry is suitable for the following landscape applications;

- Accent
- General Garden Use
- Naturalizing And Woodland Gardens
- Orchard/Edible Landscaping
- Container Planting

Planting & Growing

Darrow's Blueberry will grow to be about 3 feet tall at maturity, with a spread of 3 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years. This variety requires a different selection of the same species growing nearby in order to set fruit.

This shrub is quite ornamental as well as edible, and is as much at home in a landscape or flower garden as it is in a designated edibles garden. It does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is very fussy about its soil conditions and must have sandy, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This species is native to parts of North America.

Darrow's Blueberry is a good choice for the edible garden, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
