

Golden Wiltonii Creeping Juniper
Juniperus horizontalis 'Golden Wiltonii'

Height: 8 inches

Spread: 7 feet

Sunlight: ☐ ☒

Hardiness Zone: 3a

Other Names: Golden Rug Juniper

Description:

A stunning groundcover evergreen featuring bright lemon yellow foliage which matures to an underlying sea-green; turns deep gold-salmon in winter cold; wide spreading and ground-hugging; extremely adaptable and hardy; excellent for trailing over walls

Ornamental Features

Golden Wiltonii Creeping Juniper is a dwarf conifer which is primarily valued in the garden for its broadly spreading habit of growth. It has attractive bluish-green-variegated lemon yellow foliage with hints of silver. The scale-like sprays of foliage are highly ornamental and turn outstanding shades of gold and salmon in the fall, which persists throughout the winter. It produces blue berries from late spring to late winter.

Landscape Attributes

Golden Wiltonii Creeping Juniper is a dense multi-stemmed evergreen shrub with a ground-hugging habit of growth. It lends an extremely fine and delicate texture to the landscape composition which should be used to full effect.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Golden Wiltonii Creeping Juniper is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Groundcover

Planting & Growing

Golden Wiltonii Creeping Juniper will grow to be about 8 inches tall at maturity, with a spread of 7 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species.
