

## Unicum Tulip

*Tulipa praestans 'Unicum'*

Plant Height: 4 inches

Flower Height: 8 inches

Spread: 8 inches

Spacing: 4 inches

Sunlight: 

Hardiness Zone: 3

Other Names: Bunch Tulip

### Description:

A spectacular species tulip producing bunches of low scarlet blooms over green foliage that is edged in creamy white; this variety is extraordinary when massed in the garden or containers

### Ornamental Features

Unicum Tulip has masses of beautiful scarlet cup-shaped flowers at the ends of the stems in mid spring, which are most effective when planted in groupings. The flowers are excellent for cutting. Its sword-like leaves remain green in color with distinctive white edges throughout the season.

### Landscape Attributes

Unicum Tulip is an herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and should not require much pruning, except when necessary, such as to remove dieback. It has no significant negative characteristics.

Unicum Tulip is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

**Planting & Growing**

Unicum Tulip will grow to be only 4 inches tall at maturity extending to 8 inches tall with the flowers, with a spread of 8 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 4 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen! As this plant tends to go dormant in summer, it is best interplanted with late-season bloomers to hide the dying foliage.

This plant should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America. It can be propagated by multiplication of the underground bulbs; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
