

## Linda Sue Hosta

*Hosta 'Linda Sue'*

Height: 24 inches

Spread: 4 feet

Spacing: 4 feet

Sunlight:  

Hardiness Zone: 3a

Other Names: Plantain Lily, Funkia

### Description:

A blue-green leaf center with wide chartreuse margins that don't burn; leaf is rounded and deeply cupped shaped; spikes of white flowers in early summer; very slow growing but becomes quite large

### Ornamental Features

Linda Sue Hosta features dainty spikes of white tubular flowers rising above the foliage in early summer. Its attractive heart-shaped leaves remain bluish-green in color with distinctive chartreuse edges and tinges of creamy white throughout the season.

### Landscape Attributes

Linda Sue Hosta is a dense herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Linda Sue Hosta is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Groundcover

**Planting & Growing**

Linda Sue Hosta will grow to be about 20 inches tall at maturity, with a spread of 4 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 4 feet apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
