

White Star Sweet Gum

Liquidambar styraciflua 'White Star'

Height: 30 feet

Spread: 20 feet

Sunlight: 

Hardiness Zone: 5b

Other Names: American Sweet Gum

Description:

A new and interesting variety displaying bright green leaves that are splashed with white variegation; more compact in habit so it is perfect for the smaller garden or home landscape; spiny fruit can sometimes be messy

Ornamental Features

White Star Sweet Gum has attractive white-variegated light green foliage on a tree with an oval habit of growth. The lobed palmate leaves are highly ornamental and turn an outstanding orange in the fall. However, the fruit can be messy in the landscape and may require occasional clean-up.

Landscape Attributes

White Star Sweet Gum is a deciduous tree with a shapely oval form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a high maintenance tree that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy

White Star Sweet Gum is recommended for the following landscape applications;

- Accent
- Shade

Planting & Growing

White Star Sweet Gum will grow to be about 30 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 4 feet from the ground, and should not be planted underneath power lines. It grows at a fast rate, and under ideal conditions can be expected to live for 50 years or more.

This tree should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution. This is a selection of a native North American species.
