Plant Height: 3 feet

Flower Height: 4 feet

Spread: 30 inches

Spacing: 24 inches

Sunlight: ○ ◐

Hardiness Zone: 2a

Group/Class: Asiatic Hybrid

Description:

This stunning and unique double lily has multiple petals of pure white, with lime green stripes down the middle; this variety is a good choice to create focal interest in areas around shrubbery or border plantings

Ornamental Features

Lodewijk Lily features bold fragrant double white trumpet-shaped flowers with lime green stripes at the ends of the stems in late summer. The flowers are excellent for cutting. Its glossy narrow leaves remain green in colour throughout the season.

Landscape Attributes

Lodewijk Lily is an herbaceous perennial with a rigidly upright and towering form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects
- Disease

Lodewijk Lily is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Container Planting

Lodewijk Lily

Planting & Growing

Lodewijk Lily will grow to be about 3 feet tall at maturity extending to 4 feet tall with the flowers, with a spread of 30 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 24 inches apart. It tends to be leggy, with a typical clearance of 1 foot from the ground, and should be underplanted with lower-growing perennials. The flower stalks can be weak and so it may require staking in exposed sites or excessively rich soils. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by multiplication of the underground bulbs; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Lodewijk Lily is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.
