Moroccan Daisy

Moroccan Daisy

Rhodanthemum hosmariense

Height: 8 inches

Spread: 24 inches

Spacing: 20 inches

Sunlight: ☉ ●

Hardiness Zone: 8b

Other Names: syn. Pyrethropsis hosmariense, Leucanthemum

Description:

Showy, white daisy-like flowers, with bright golden centers, cover a mound of strong, flexible stems on this sub-shrub; long blooming; tends to like drier conditions; best in full sun but will tolerate bright shade; great for rock gardens

Ornamental Features

Moroccan Daisy is covered in stunning white daisy flowers with gold eyes held atop the stems from late spring to early winter. The flowers are excellent for cutting. Its tiny fragrant ferny leaves remain grayish green in colour with hints of silver throughout the season.

Landscape Attributes

Moroccan Daisy is an herbaceous perennial with a mounded form. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Moroccan Daisy is recommended for the following landscape applications;

Planting & Growing

Moroccan Daisy will grow to be about 8 inches tall at maturity, with a spread of 24 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 20 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This species is not originally from North America. It can be propagated by division.

Moroccan Daisy is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers against which the thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.

This plant is not reliably hardy in our region, and certain restrictions may apply; contact the store for more information.
