Height: 20 inches

Spread: 20 inches

Sunlight: ○ ◐

Hardiness Zone: (annual)

Other Names: Garden Mum, Korean Mum, Dendranthemum

**Description:**

This variety is an early season bloomer; orange-copper double blooms cover this perfectly mounded plant; blooms tend toward yellow in warmer zones; adaptable to various conditions; best in full sun

**Ornamental Features**

Padre Orange Chrysanthemum is covered in stunning double orange daisy flowers with coppery-bronze overtones at the ends of the stems from late summer to early fall. The flowers are excellent for cutting. Its fragrant ferny leaves remain dark green in colour throughout the season.

**Landscape Attributes**

Padre Orange Chrysanthemum is an herbaceous annual with a mounded form. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Padre Orange Chrysanthemum is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Container Planting

**Planting & Growing**

Padre Orange Chrysanthemum will grow to be about 18 inches tall at maturity, with a spread of 20 inches. Although it's not a true annual, this plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

## Padre Orange Chrysanthemum

---

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Padre Orange Chrysanthemum is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It can be used either as 'filler' or as a 'thriller' in the 'spiller-thriller-filler' container combination, depending on the height and form of the other plants used in the container planting. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
