Wildfire™ Flicker Coleus

Solenostemon scutellarioides 'Flicker'

Wildfire Flicker Coleus
Photo courtesy of NetPS Plant Finder

Height: 14 inches

Spread: 14 inches

Spacing: 12 inches

Sunlight: ◐ ●

Hardiness Zone: (annual)

Other Names: Flame Nettle, Painted Nettle

Group/Class: Wildfire Series

Description:

This distinctive, showy selection has a tight and compact habit, with peachy-gold leaves splashed with red veins that blush pink in the sun; vigorous and self-branching; great for gardens, containers and mixed borders

Ornamental Features

Wildfire Flicker Coleus' attractive small twisted lobed leaves remain gold in colour with distinctive red veins and tinges of lime green throughout the year on a plant with a mounded habit of growth.

Landscape Attributes

Wildfire Flicker Coleus is an herbaceous annual with a mounded form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant. The flowers of this plant may actually detract from its ornamental features, so they can be removed as they appear. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Wildfire Flicker Coleus is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Container Planting
- Hanging Baskets

Wildfire Flicker Coleus

Planting & Growing

Wildfire Flicker Coleus will grow to be about 14 inches tall at maturity, with a spread of 14 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 12 inches apart. Although it's not a true annual, this fast-growing plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant does best in partial shade to shade. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It is not particular as to soil pH, but grows best in rich soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This is a selected variety of a species not originally from North America. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Wildfire Flicker Coleus is a fine choice for the garden, but it is also a good selection for planting in outdoor containers and hanging baskets. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a canvas of foliage against which the thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
