### Summer Breeze Caladium

***Caladium 'Summer Breeze'***

*Summer Breeze Caladium*
*Photo courtesy of NetPS Plant Finder*

Height: 18 inches

Spread: 18 inches

Spacing: 14 inches

Sunlight: ◐ ●

Hardiness Zone: (annual)

Other Names: Angel Wings, Candidum Junior Caladium

**Description:**

A beautifully refined element to add to a shady site; luminous white leaves have bright red veins and dark green edges; a great compact garden accent that will tolerate some sun; an excellent display for containers

**Ornamental Features**

Summer Breeze Caladium's attractive heart-shaped leaves remain white in colour with distinctive cherry red veins and tinges of dark green throughout the season on a plant with a mounded habit of growth.

**Landscape Attributes**

Summer Breeze Caladium is a dense herbaceous annual with a mounded form. Its relatively coarse texture can be used to stand it apart from other garden plants with finer foliage.

This is a relatively low maintenance plant, and should not require much pruning, except when necessary, such as to remove dieback. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Summer Breeze Caladium is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use
- Container Planting
- Hanging Baskets

## Summer Breeze Caladium

### Planting & Growing

Summer Breeze Caladium will grow to be about 18 inches tall at maturity, with a spread of 18 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 14 inches apart. Although it's not a true annual, this plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant does best in partial shade to shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by multiplication of the underground bulbs; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Summer Breeze Caladium is a fine choice for the garden, but it is also a good selection for planting in outdoor containers and hanging baskets. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a canvas of foliage against which the thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
