### Large Cape Rush

***Chondropetalum elephantinum***

Height: 5 feet

Spread: 24 inches

Sunlight: ○ ◐

Hardiness Zone: 8b

**Description:**

A dense, tufted clump of tall, unbranched, dark green stems; brown sheaths at the joints drop off in summer, leaving dark nodes; clusters of dark brown flowers appear at the tips in summer to fall; drought tolerant, but appreciates water in spring

**Ornamental Features**

Large Cape Rush features showy clusters of dark brown flowers at the ends of the stems from late summer to late fall. Its grassy leaves emerge light green in spring, turning dark green in colour with showy bluish-green variegation and tinges of khaki (brownish-green) the rest of the year.

**Landscape Attributes**

Large Cape Rush is a dense herbaceous evergreen perennial grass with a shapely form and gracefully arching stems. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and usually looks its best without pruning, although it will tolerate pruning. It has no significant negative characteristics.

Large Cape Rush is recommended for the following landscape applications;

- Vertical Accent
- Hedges/Screening
- Rock/Alpine Gardens
- General Garden Use
- Container Planting

## Large Cape Rush

**Planting & Growing**

Large Cape Rush will grow to be about 5 feet tall at maturity, with a spread of 24 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an evegreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil pH, but grows best in sandy soils, and is able to handle environmental salt. It is somewhat tolerant of urban pollution. This species is not originally from North America. It can be propagated by division.

Large Cape Rush is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.

This plant is not reliably hardy in our region, and certain restrictions may apply; contact the store for more information.
