Height: 12 inches

Spread: 18 inches

Spacing: 6 inches

Sunlight: ○

Hardiness Zone: (annual)

Group/Class: Dragon Series

Description:

Beautiful rosy-pink flower spikes rise above green foliage during the early summer months and into the early fall; an outstanding addition to borders, patio containers or fresh cut arrangements

Ornamental Features

Rosey Dragon Snapdragon has masses of beautiful clusters of lightly-scented rose tubular flowers with yellow overtones rising above the foliage from mid spring to early fall, which are most effective when planted in groupings. The flowers are excellent for cutting. Its small pointy leaves remain green in colour throughout the season.

Landscape Attributes

Rosey Dragon Snapdragon is an herbaceous annual with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This plant will require occasional maintenance and upkeep, and should not require much pruning, except when necessary, such as to remove dieback. It is a good choice for attracting bees and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Rosey Dragon Snapdragon is recommended for the following landscape applications;

- Border Edging
- General Garden Use
- Container Planting

Planting & Growing

Rosey Dragon Snapdragon will grow to be about 10 inches tall at maturity, with a spread of 18 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 6 inches apart. Although it's not a true annual, this fast-growing plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Rosey Dragon Snapdragon is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
