Plant Height: 24 inches

Flower Height: 3 feet

Spread: 7 feet

Sunlight: ○ ◐

Hardiness Zone: (annual)

Description:

A stunning spreading variety featuring masses of golden yellow blooms over lush, deep green foliage; a versatile selection that can be trained as low hedges, or grown in landscapes and containers; heat and drought tolerant once established

Ornamental Features

Sunburst Spreading Lantana features showy cymes of yellow flowers with gold overtones at the ends of the branches from late spring to mid fall. Its tomentose pointy leaves remain green in colour throughout the year.

Landscape Attributes

Sunburst Spreading Lantana is a multi-stemmed annual with a ground-hugging habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and should not require much pruning, except when necessary, such as to remove dieback. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Sunburst Spreading Lantana is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Container Planting
- Hanging Baskets

Sunburst Spreading Lantana

Planting & Growing

Sunburst Spreading Lantana will grow to be about 24 inches tall at maturity extending to 3 feet tall with the flowers, with a spread of 7 feet. Although it's not a true annual, this fast-growing plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Sunburst Spreading Lantana is a fine choice for the garden, but it is also a good selection for planting in outdoor containers and hanging baskets. Because of its spreading habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
